

Shape To Fabrication Conference 2018 Video Transcript

(Speaking: Moritz Waldemeyer – Studio Moritz Waldemeyer)

Why should people visit Shape to Fabrication? Because it's an immersion in a lot of different fields of creativity that use this very interesting toolset.

(Speaking: Arthur Mamou-mani – Shape to Fabrication 2018)

We tried to get an array of people from small firms, large firms...

(Speaking: Toby Clark – Arup)

Makers, architects, engineers, designers. It's that diversity that makes it attractive to me.

(Speaking: Zsuzanna Püspöki – Mirrakoi)

I must say, I really appreciate the people, because you really feel the team feeling that there are all these forums, we also have our own forum, people have problems, questions, then sometimes someone else is answering. It's not necessarily from the company itself.

(Speaking: Maialen Calleja Calvo – Mamou-mani Architects)

I think it's all about collaboration with people at this event and how you interact with these people, and how you ask them questions. We have David Rutten here, like what are the chances that you get to actually talk to the person that designed this tool and wrote this tool for you to be able to do your designs?

(Speaking: Konstantin Gaytandzhiev – Chaos Group)

The organisers, Simply Rhino are able to gather really important people, big influencers in the industry that use the products that use Rhino, that use Grasshopper. They basically gather them at one place and everyone speaks about their projects.

(Speaking: Pablo Zamorano – Heatherwick Studio)

The attendees and the speakers usually love the nitty gritty stuff, you know, and everybody shows work in progress usually. This is not about the final picture or pretty renderings but it's about the process.

SHAPE TO FABRICATION.

(Speaking: Moritz Waldemeyer – Studio Moritz Waldemeyer)

So, there is this willingness of sharing and of communication, collaboration. There isn't really any kind of strong egos that would prevent this. It's generally a super lovely set of people that are moving all of this forward.

(Speaking: Chris Precht – Penda)

You really see where the design processes and the building processes in architecture are going to, right. What are the changes coming in the next years? Because we architects, we just can work with the tools that other people are developing and you know, like we are as good as the tools provided to us.

(Speaking: Moritz Waldemeyer – Studio Moritz Waldemeyer)

And so even if you're not from an architectural background, or if you do anything creative at all, you will definitely find inspiration here.
